CORROSION RESISTANT EPOXY & URETHANE COATINGS

Corr-Paint™ CP2060

Technical Bulletin A6-S1

Corr-Paint™ CP2050-LF coats flare stack.

Aremco's Corr-Paint™ epoxy and urethane-based coatings are used for producing corrosion and wear resistant barriers to 500 °F. Typical applications include tanks, pipelines, boilers, precipitators, scrubbers, bag houses, cyclones, hoppers and other process equipment used in the power, pulp and paper, and chemical processing industries.

Corr-Paint™ CP2060 coats pump housing.

Epoxy-Phenolics

CP2050-FF Large-Fiber Reinforced

CP2050-LF Fine-Fiber Reinforced CP2050-NF Unfilled

Novolac-Epoxies

CP2060 SiC Filled, Hi-Build, 500 °F CP2070 CP2075 Gray, Hi-Build, 400 °F

FEATURES

- · Single-Part, No Mixing
- · Low Viscosity
- · Cures at Room Temperature
- · High Wear Resistance
- Excellent Salt Spray Resistance
- Maximum Temperature, 400 °F
- Two-Part Systems
- · High Viscosity for Thick Depositions
- · Cures at Room Temperature
- Excellent Corrosion Resistance
- · Excellent Wear Resistance
- Maximum Use Temperature, 500 °F
- Two-Part Systems
- · Cures at Room Temperature
- Gray, Low Viscosity, 300 °F Excellent Corrosion Resistance
 - · Excellent Wear Resistance

Corr-Paint™ CP2000 coats motor housing.

- ² CP2010 will begin to discolor at 300 °F.
- ³ Estimated Wet Film Thickness (WFT).
- ⁴ Recommended Dry Film Thickness (DFT).
- ⁵ Actual coverage will vary depending on material losses during mixing and application. 350–400 °F if cured for 2 hours at 185 °F.
- ⁶ Where a value is provided for "Min Air Set", it is recommended that the coating set at room temp.

for, at minimum, the specified time prior to curing. ⁷ Withstands intermittent service temperatures of

Surface Preparation Notes

All surfaces should be free of oil, grease, dirt, corrosives, oxides, paints or other foreign matter. No further preparation is required when coating ceramics, refractories or graphites. Smooth metal surfaces should be abrasive blasted to an SSPC-SP10 near white blast. Remove abrasive residue using air pressure; do not clean with organic solvents

Aremco's Corr-Prep™ CPR2000 is recommended as an alternative when sandblasting is not possible. This is a specially formulated, water-based, zinc phosphate metal etching solution that is non-toxic, non-flammable, noncaustic, and non-corrosive. It etches metal to provide surface profile for superior coating adhesion to aluminum, galvanized metal, steel, and stainless steel. It also helps to improve longterm corrosion protection. Application is simple—just brush or spray liquid on the substrate, allow to sit for 20-30 minutes, then rinse off and dry substrate thoroughly prior to coating.
